EU regulation on deforestation-free supply chains 2023/1115  
EUDR

Ladies and Gentlemen,

Sustainability and social responsibility are integral components of our corporate policy. This includes taking a holistic view of ecological, legal and social challenges in our organization, our processes, our supply chain and our products.

The EU Deforestation Regulation (EUDR) on deforestation-free supply chains was officially adopted and came into force in 2023.

The objectives of the EUDR are to curb deforestation and forest degradation and to reduce greenhouse gas emissions. Affected products can be identified by customs tariff numbers and are, for example, from the raw materials cocoa, coffee, oil palms, rubber, cattle, soy and wood.

The implementation period is 18 months, during which we work on this as a company, adapt our procedures to national laws and the regulation.

We are actively working on the implementation to meet the legal requirements within the deadlines.

Yours sincerely

Würth Industrie Service GmbH & Co. KG
